The subscription price of this paper for a year is THREE

Sessions ONE DOLLAR per copy.

A reduction of 20 per cent. (one-fifth of the full charge will be made to any one who shall order and pay for, at one time, five copies of the Weekly paper; and a like re-duction of 25 per cent. (or one-fourth of the full charge)

more copies.

No accounts being kept for this paper, it will not be forwarded to any one unless paid for in advance, nor sen any longer than the time for which it is so paid.

## TUESDAY, MAY 2, 1854.

THE RIGHTS OF WAR.

The rights, immunities, and liabilities attaching to nations in a state of war, and under the conditions of war-to neutrals as well as to belligerents—have been the subjects of discussion from not unpleasant job of travelling to St. Paul, in the time to time for a century; and the progress of ideas has been marked by nothing more in accordance with the benign spirit of the age than referred to the Committee on Indian Affairs the ameliorations which have grown up in the usages of the Senate, and the report of that commitof grim-visaged war. It was because the public tee upon it, which was "submitted, considered, speech lately made in London by our Minister, Mr. BUCHANAN, was in such harmony with the spirit of contains the following honorable tribute to the cathese ameliorations, as well as with the character of pacity and integrity of the man upon whose characa minister of peace, that his speech was read with ter had been heaped every opprobrious epithet which such general approval by his countrymen at home; party ingenuity and industry could invent or find : and no part of it we thought had given more satisfaction or was more in consent with an enlightened philanthropy than his striking reference to the practice of privateering. We reproduce the passage for the pleasure of the realer:

"The time will arrive when war against private pro perty upon the ocean will be entirely prescribed by all ed by the testimony. On the contrary, the witnesses of Nebraska question an issue in Scott county? We civilized nations, as it has tready been upon land, and when the gallant commanders of the navies of the world will esteem it as great a disgrace to rob a peaceful merchant vessel upon the seas as the general of an army would now do to plunder the private house of an unoffending citizen." .

Having some recollection of the aggravation which this practice of privateering imparts to the sufficiently cruel necessities of war, and long taught by discussion to regard it as an unnecessary and The payments of the moneys was made by him under the that any of them should be disturbed. demoralizing evil, we observe with regret that a writer, of much ability we admit, has, in the Union of yesterday, taken decided ground against the doctrine advanced by Mr. Buchanan. We notice the article, not for the purpose of any extended re- this plain, fair, and complete acquittal of these genmark on it, nor yet merely to express our regret at tlemen of all the infamous charges, eagerly seized seeing views so retrograding put forth through the upon and repeated by them, with greater and fouler Government journal, but chiefly to mark the course exaggeration at every repetition, in their respective of public discussion on a point of great import.

When the above remarks were prepared for our Daily paper, we were not aware that we were soon to see a kindred doctrine, and a step even in advance of it, proposed in Congress; for such, in substance, was the drift of the motion, if we understand it, made in the Senate on Monday by an honorable member from Louisians. We did not hear, and have not yet had an opportunity to read, the speech which the eloquent member delivered in favor of clothing the President with the power, at his discretion, of suspending the operation of our neutrality laws; that is, virtually, it strikes us, of conferring on the Executive the power of placing the country in a state of war with a foreign nation. With all deference, this seems to us a very questionable measure. A similar power has been exercised by the Executive, we all know, at no remote period, and a bloody foreign war, commenced without the authority of law, was the consequence; but whether it be wise or prudent to confer by express statute so critical a discretion on the President appears to us, at first blush, extremely problematical. But we must wait the action of the able committee of the Senate to which the delicate matter has been referred before it is open to fuil comment.

FROM CHINA.

A letter dated at Shanghai on the 13th of February says : "The Imperialists have not retaken Shanghai and there is little prospect that the force before the city can retake it, as the besieged are well provisioned, and have access to supplies of any nature at the market prices. The Russian steamer Vostock has arrived from Nangassaki with despatches from the Russian Admiral for the mail, and has returned. It is reported that a commercial arrangement generally advantageous, has been formed by Russia with Japan, to be operative in a year. We do not believe the rumor, as we do not hear that the Russian squadron has gone to Jeddo, and at the capital city only is it probable that any such arrangement

SEIZURE OF A SLAVER.

The brig Glamorgan, of New York, from Congo river, coast of Africa, March 11, arrived at Boston on Friday in charge of Lieut. John Downes, of the U. S. Navy, she having been seized by the United States brig Perry, on suspicion of being a slaver, and sent home for trial. Her captain, Casper Kehrmann, a native of Bremen, but a citizen of the United States, the first officer and two seamen, were brought home, and were taken in custody by the United States marshal. The Boston Courier gives the five years, will be appalled at the complacent audafollowing account of her capture :

following account of her capture:

"When first seen by the Perry the Glamorgan was supposed to be an English man-of-war brig, and the Perry bore down to speak her. Finding that she refused to recognise the signals made by Capt. Page, of the Perry, suspicions were aroused, and all sail was made on board the latter to overtake her. At night studding sails were got out by the Perry, and next morning the Glamorgan was discovered, hull down. A calm succeeding, and the Perry being almost motionless, Lieut. Downes was ordered to chase her in a boat. Taking five men with him, well armed, he started in pursuit, the Perry following as fast as the wind would permit, and after a long and a hard pull got up with her, not, however, until a shot had been fired over the boat. Lieut. Downes immediately been fired over the boat. Lieut. Downes immediately boarded her, and asked to look at the ship's papers, which were found to be correct. He then ordered the hatches to be taken off, which the captain seemed unwilling to permit, and, upon the command being repeated, the cap-tain observed that he might as well admit that the vessel had been fitted out for a slaving expedition. The Perry came up and took possession of the brig. She had on board a large quantity of water, farina, and the usual implements of slave traffic

"The Glamorgan is a fast sailing Baltimore clipper brig of 150 tons, has a slave deck, and is owned in New York."

Companies D, G, I, and K, of the Third Artillery, land ed at old Point Comfort by the Falcon on her last intended trip to Aspinwall, will be taken up by the Illinois on

THE WEEKLY NATIONAL INTELLIGENCER 1 "FOUR YEARS OF FRAUD vs. ONE OF INTEGRITY."

Such is the heading, in capitals, of a paragraph Dollars, payable in advance.

For the long Sessions of Congress, (averaging eight months,) the price will be Two Dollars; for the short ing out, in a reckless wholesale generalization, the often refuted specific calumnies against the admin istration of one who quitted the Presidency with unsullied honor, and as generally esteemed by the men, to any one who will order and pay for, at one time, ten of all parties, whose esteem is worth having, as any of his predecessors since the days of WASHINGTON

One of the "series of monster frauds" of which the administration of Mr. FILLMORE has been accused, and which for months was trumpeted forth in all the Democratic papers of the Union, with the Union here at their head, is "the case of Alexander Ramsey." The charges against him were of so monstrous a character that it was thought necessary to appoint commissioners, and cut out for them the Territory of Minnesota, to investigate the charges. and agreed to" on the 24th of February last,

"That they have carefully examined all the testimony taken by the commissioners during nearly three months which they were in session at St. Paul, in the Territory of Minnesota, and have arrived at the conclusion that the conduct of Governor Ramsey was not only free from blame, but highly commendable and meritorious. Not one of the charges preferred against him has been sustainhave negatived them; proving, conclusively, that he mmendation both as a man and an officer.

"In the disbursement of the funds arising under the direction of and in strict accordance with the views and instructions of the Commissioner of Indian Affairs."

How many of "the reckless calumniators" of Mr. RAMSEY and of Mr. FILLMORE have published circles of influence? Why, the charges against the integrity of Mr. RAMSEY were reiterated with such minute circumstantiality of detail that even the best BRADLEY and CARLISLE, being engaged in the Circuit friends of that gentleman, unacquainted with the Court, did not come into Court till about 21 o'clock, when history of his official course, were deterred from attempting his defence; and we owe it entirely to the over-anxiety of his political enemies to convict him

sweeping denunciation of "the Whig Administration" is no doubt intended to include was the be disposed of the other case could be taken up. 'Galphin claim," so called-notwithstanding the irresistible evidence put before the public, officially cases of John Charles Gardiner were last brought to its and otherwise, that this claim had been allowed as notice Mr. FENDALL stated that he proposed to try the invalid by the Democratic Administration under Mr. Polk, notwithstanding the proofs adduced that the State of Georgia had recognised the claim of inte- United States. rest, and that the United States, in assuming the rest, and that the United States, in assuming the of his colleague, that this day was fixed for the other debt, stood ipso facto in the place of Georgia, and case. He certainly could not try the perjury case to-day, were as much bound to pay the interest as to pay the principal. But it happened that the gentleman who had been for many years the agent of the claimants had been selected by General TAYLOR as one of his Cabinet. This was enough for "the reckless calumniators" to turnish ground for "implicating some of the most distinguished Whigs in the country" in the "monstrous frauds" begun and carried through all their forms under a Democratic Administration, and only "consummated" under that of the Whigs as a matter in which they had nothing to do but to consummate.

Another of the "monster frauds" charged to Mr. FILLMORE is that of the "Gardiner case." though it has been incontestably proved that the moment the first rumor reached his ears that suspicion attached to the claim he instituted a searching inquiry, sent commissioners to Mexico, and ordered a prosecution of the individual accused. It is notorious that the trial of that individual occupied the time of the Criminal Court here more closely and laboriously than any case that had ever been brought before it; that the first jury could not agree; that he was tried a second time, with the added testimony of a second commission of inquiry; and that, when the last jury brought in their verdict of "guilty," the man committed suicide.

These and similar things considered, we agree with the Government paper most heartily that "the historian, when he comes to write of the last city with which the truth has been sacrificed by an unscrupulous party."

FROM HAVANA.

The leading news from Havana to the 28th ult. consists of proclamations of pardon, through the Captain-General, addressed from the Queen to certain offending subjects, whose passions and ill advice have led them to violate the laws of their faithful Oneen.

1st. A general amnesty is decreed to all those who have taken part, directly or indirectly, in any of the con-spiracies, rebellions, or invasions instigated by foreigners with the view of creating disturbances or se

any other political transgressions of law in Cubs.

2d. This pardon only applies to political offences.

3d. The amnesty is made general for all the Province

CHINESE EMIGRATION TO CALIFORNIA.—The last Cali fornia papers report a revival of the Chinese immigration into that State. A Dutch ship, the Isis, had just arrived at San Francisco, with nearly five hundred Chinamen on at San Francisco, with nearly ave hundred Chinamen on board, and reported three other vessels at Hong Kong taking in passengers when she sailed. Two ships had already left previous to the Isis with full complements

ELECTION OF CANAL OFFICERS.—It is stated that the Board of Public Works will meet on the 3d day of June her next trip to the Isthmus, starting from New York on for the election of Directors and other officers of the PARTIES IN IOWA.

The Union of Saturday claims a triumph for the Democracy in Iowa at the recent April election in that State, and more than hints that the result was noon. The Sections met again at half-past seven the an endorsement of the Nebraska question. We do same evening in generalmeeting, when Professor B. Silnot often follow our neighbor to far-off localities for LIMAN, Jr. read a paper on the question as to whether the rectification of its errors, but a friend, who feels anthracite is the coke of bituminous coal? desirous that the political character of the State of Iowa should not be misunderstood here at the seat of Government, furnishes us with the following facts in disproof of this statement of the Union touching he politics of that rising young member of the Con-

The Union admits, and it is a well-known fact, that the Whigs had no candidate for the only State officer to be elected at that election. The Nebraska question was not even a side issue in the contest, and did not figure one way or the other in the canvass. The Union's article says:

"Among the most pleasing incidents of this election which have come to our knowledge is that relating to the which have come to our knowledge is that relating to the county of Linn, which has heretofore given a Democratic majority of from twenty-five to seventy-five. \* \* \* \* In this county Dr. Eads, the Democratic candidate, received a majority of one hundred and seventy, being more than double the usual Democratic majority."

Now, the two principal towns in Linn county are Marion and Cedar Rapids, the two containing about twenty-five hundred inhabitants, and we understand there are not twenty men in the two towns who are not openly opposed to the Nebraska bill in its present shape. Indeed, a gentleman from that quarter, recently in this city, declared that there were only two "defenders of the faith" in those towns, being no less personages than the two Postmasters.

Under this state of things, if the Union finds "the most pleasing incidents" in the result of Linn county, how does it like the incident in Scott county, where the Democracy have a majority of 200, and at the recent election gave Stewart, the Independent candidate, 359 majority? Was the the complainants themselves, in almost every instance, inquire for information. It is worse than useless to claim that this question was among the issues of neither violated the stipulations of the treaties, as un-derstood by the parties to them, nor was governed in his not so claim it. This unsuccessful double of the conduct by motives other than such as entitle him to Union may do to circulate, but the next August election in Iowa will tend somewhat to open the eyes of the Union about the "soundest Democratic free treaties he acted in accordance with the understanding State on the subject of the compromises of the Conbetween the commissioners who negotiated them, the In- stitution." We are proud to say that Iowa is sound dians, and the traders for whom provision had been made. on the compromises of the country, and unwilling

> CASES OF JOHN CHARLES GARDINER. In the Criminal Court of the District of Columbia.

> > MONDAY, MAY 1, 1854.

Attorney stated that this was the day fixed for the trial pitality. of the case of the United States against JOHN CHARLES GARDINER, being the indictment for perjury, and standing No. 12 on the docket. The witnesses for the United States were called. Some answered, and the District Attorney stated that the others were expected. Messrs. the District Attorney again brought up the case.

Mr. Bradley stated that the counsel for the defendant were taken by surprise at finding that the United States expected to try the indictment for perjury to-day. They that a commission was appointed to investigate his had been under the impression that this day was fixed for the case of false swearing, in which case they had Another of the "monster frauds" which this given notice that they should file a demurrer, and which stands before this case. They were willing to take up the demurrer, and when the case for false swearing should

> The Court remarked that it recollected that when the dictment for perjury first. This day was fixed for that

Mr. Carlisle said his impression had been, like that being engaged in the Circuit Court; and Mr. BRADLEY had got leave of absence from that Court in order to at

tend the Supreme Court.

Mr. Fendall expressed his surprise that the counsel for the defendant should be under any misapprehension as to the particular case fixed for to-day. When the subject was last before the Court he distinctly announced the purpose of the prosecution to try the perjury case first, and gave some reasons for doing so. He stated on that occasion that the field of evidence to be travelled over in the perjury would probably be less extensive than that e swearing cases; that though some of the assignments in the perjury case would be maintained by a portion of the same evidence as that which would be offered in the other case, yet, on the whole, the trial of the perjury case would be shorter; that, in the event of a conviction, the Government might perhaps not deem it necessary to press the other indictment; and that there was therefore a manifest convenience in trying the per-

jury case first.

As to the demurrer to the indictment for false swearing. the counsel for the United States had, on the occasion re ferred to, expressed their willingness to discuss it on any day that might be named by the opposite counsel; bu none had been suggested. The Court would find on the docket for June term, 1852, an entry to the effect that a demurrer to that indictment had been filed and overruled on the same day on which the demurrer in the case of George A. Gardiner was overruled. There had probably been some agreement, afterwards forgotten, that the decision of the Court on the demurrer which had been argued should apply to the other indictment under the same statute wever, it was overlooked on all sides, when the de fendant's counsel, some weeks ago, stated that they should demur to the indictment against John Charles Gardiner on the same grounds as those assigned for the demurrer to the indictment against George A. Gardiner, and on the additional ground that the oath was taken before a notary

Neither the Court nor the defendant's counsel had any recollection that there had been a demurrer in the case.

The DISTRICT ATTORNEY said he was willing that the indictment in the false swearing case should be open to demurrer, and to take it up when the perjury case was dis-posed of. But the perjury case was fixed for this day. The United States had detained some witnesses and brought others at great expense and inconvenience, and he must insist on the case being disposed of in some way. The counsel for the defendant had apprised him that they thought they had the right to try him in his absence. This, the District Attorney said, was the question to be first settled by the Court. He proposed calling the de-fendant in both the cases. The Court would then know

whether he is here or not. Messrs. BRADLEY and CARLISLE objected to this course. DISTRICT ATTORNEY stated that rumors had smached him. from several quarters, that the defendant had gone away, and would not stand his trial; and Mr. Carness, on the other hand, stated that he and his colleague had been informed by friends of the defendant that he sad mean to appear and stand his trial. Mr. C. supposed that the eason why he was not here to-day was that he knew his ase could not be tried in sonsequence of the engagements

of his counsel elsewhere.

The Court decided that in any case in which, if there were a conviction, the sentence by law would be impri-sonment, the Court would require the defendant to be resent, and would not ever allow a motion relating to t to be argued in his absence. Such toe had been the practice of the Circuit Court. The United States have a right to call the defendant, whose duty it is to be here, and, if he does not answer, to forfeit his recognizance. If he should appear at any time during the term, the Court have the power by law to strike out the forfeiture. John Charles Gardiner was them cailed, and did not

answer. The usual proclamation was made, and his re cognizances in both cases were forbited.

AMERICAN SCIENTIFIC ASSOCIATION.

Our last notice of the proceedings of the Association came up to the close of the meetings on Friday after-

Lieut. GILLISS read apaper on earthquakes in Chili. FIURTH DAY.

Saturday being deemed too inclement for the intended trip to Mount Vernon, the Association met and conduct ed business as usual. Professor FRANKLIN BACHE, who was appointed on Frilay as Chairman of Section A for the following meeting, took the chair accordingly on Saturday.

The following are mong the articles read in Section A An account of a sorm that passed over Connecticut, August 1, 1851, by Irof. John Brockleshy. On the distribution of temperature in and near the Gulf Stream, off the past of the United States, from ob-

Superintendent Coas Survey.

Results of some investigations respecting the double comet of Biela, by Prof. LUBBARD, of the National Obser-

vatory.
Suggestion relative to the observation of the annular

In Section B. over which Professor WM. B. ROGERS resided, the following were among the papers read, viz : A sketch of the general geological structure of country in connexion with the United States Boundary Commission, by C. C. PARRY, M.D., being a collation of all the collections and observations made under the direction of Licut. Col. Emory during the past five years.

Remarks upon the geological formation of the country along the line of the boundary survey, based upon the

xamination of Dr. Perry, made under the order of Maj Emery, by JAMES HALL. On the chemical relations of odors, and their employ

ment as tests, by Gro. C. Schapper.

Life in its physical aspects, by Chas. Girard.

THE EVENING SESSION was held in general meeting, when the Association listened to a culogium on the late minent and able astronomer and mathematician, SEARS C WALKER by Prof R A GOULD of Cambridge Mass

The following are the gentlemen to whom the Association have confided the duty of taking measures for the observation of the annular eclipse on the 26th of May

Professors Bache, Peirce, Alexander, Keeley, Snell,

The Association on Monday carried out its purpose of making a visit to Mount Vernon, on board the steamer half of astronomical science. George Washington. At the White House the standing committee had provided a collation, to which we hear ample justice was done by the party. The association machine, in which a succession of sparks, or continuation did not go ashore at Alexandria, and thus its citizens of electrical excitement, could be kept up indefinitely At the opening of the Court this morning the District missed the pleasure of exercising their well-known hos- with the most trifling exertion of power. It seems to be

Tuesday morning the Association came to order at 10 clock, in general meeting, Prof. J. D. Dana in the

A communication was received from President Way-LAND, of Browne University, and the city of Providence, inviting the association to make that city the place of its next annual meeting. The invitation from the Faculty of Georgetown College was respectfully declined. (We believe there is a probability the declination will be re-

believe there is a probability the declination will be reconsidered.)

The names of several gentlemen were offered as candidates for membership. After the general meeting of this evening it was determined to accept the invitation of W. W. Corcoran, Esq., to visit him at his mansion.

The association then divided into sections. In section A a paper was read by Prof. Norton on comets.

The next paper was on the distribution of temperature in and near the Gulf Stream, off the coast of the United States, from observations made in the Coast Survey, by

lrawn to exhibit the varying temperatures of the sea at regular distances from the coast to about four hundred iles eastwardly in the Atlantic. Many interesting facts were developed, and some considerable approach made towards discovering the laws to which these variations of temperature are subject. Some remarks were made on the form of the floor or the bottom of the ocean, going to show that along our coast some extraordinary depres sions exist. For instance, on the seaward line abreast of Charleston, from the shore to sixty miles out, the depth ncreases pretty gradually, till at that distance it has acpuired a depth of one hundred fathoms. But it soon deepens with great rapidity, as if on the side of a mountain until at about eighty miles out the ocean-bottom is more than six hundred and fifty fathoms from the surface. This continues forward less than ten miles, when the depth as liberality of Shelby College in permitting its transfer suddenly decreases to not more than three hundred and from place to place for the purposes of science merits the fifty fathoms, which so goes on only a few miles, when it again deepens to about five hundred fathoms, with subsequent fluctuations. There is therefore a submerged moun tain peak or ridge between these points of a truly re-markable character. The differences in the temperature vary almost precisely according to the change of contour of the bottom, showing that the temperature at great depths is much modified by the propinquity of the ocean's bed. It appears that the Gulf Stream, whilst certainly not superficial, does not run to the bottom, for off Cape

verage winter temperature much further north. Lieut. Maury followed Prof. Bache in a paper on the same general subject, but having regard to the surface rather than the depths of the stream. He showed that the stream varies its course according to the season, having a more southerly sweep in winter. The stream is more rapid off Cape Hatteras than Cape Cannaveral, and, what is quite remarkable, it never deposites the seaweed, &c. with which it is so plentifully beset on the ocean, with its highest point in the centre or axis of the stream, and sloping off like the roof of a house each way. This stream is what modifies so agreeably the climate of western Europe, and at the same time is the prolific parent of fogs, if not of storms also. At all events, storms that arise on the coast of Africa trailing westward fall into its influence and sweep around its circuit. It was in this stream that the unhappy San Francisco was on the fatal 20th December, and it was along its eastwardly current that the ship drifted. The Gulf stream. notwithstanding its magnitude, is asserted by Lieut. Maury as being sensibly affected by the discharge of the waters in winter from the Chesapeake, Delaware, and

Florida, at twelve hundred fathoms, the water in summe

is of a temperature of 38° Fahrenheit, a degree below the

The time for a temporary adjournment having arrived, the Section took a recess of about three-quarters of an hour. In the course of the session the President of the United States and the Secretary of War entered the Section and remained a short time. The delegation of Sac and Fox and Kickapoo Indians that arrived hither on Monday evening from the Upper Missouri also gave a look in upon the proceedings of the learned pale faces. They remained about a quarter of an hour. The Sacs and Foxes were decked in their brightest blankets, with spear in hand and every thing point device. The flicka poos were in ordinary citizens' dress.

In Section B some of the subjects allotted for the day were submitted by the authors of the papers respectively. The only one we were able to attend was that by Dr. J. L. SMITH OR meteorie stones.

## GENERAL MEETING.

At two o'clock the Association met in general meeting, when it was, on recommendation of the standing committee, put and carried that the invitation to meet next year at Providence, Rhode Island, be complied with; also, that the day of meeting be the third Wednesday in August, 1855.

The Standing Committee also made the nomination for officers for the ensuing year, all of which were elected. They are as follows:

Professor Torrey, President.

Dr. Wolcorr Gibbs, General Secretary. Dr. ELWYS, Treasurer. Several new members proposed were also admitted.

The business of the evening session, at half-past 7 o'clock, is to listen to a paper from Dr. ROBERT HARE.

In section A a paper on the different astronomical methods of determining the longitude, by Lieut. C. H. Davis, was read by Prof. Lovering.

Mr. Bond read a paper on the determination of the longitude of the Observatory at Cambridge from the chronometric expeditions of the Coast Survey.

This gave rise to numerous questions from members On the meteorological phenomens observed at various oints on the Mexican Boundary Survey, by Marine T. V. CHANDLER.

This gave rise to numerous questions from member and many elucidations from Mr. Bond.

Then followed the longitude of America; determined by moon culminations, by Prof. B. Peirce.

Prof. Peirce commenced by apologising for the title of his paper, which referred to no particular place, but to the character of the position the science of this country was compelled to assume by the perseverance of our Gov erament in tying us to a little island across the ocean and making us subservient, as it were, to the Observatory of Greenwich. After a most discriminating and learned analysis of the various plans of finding longi-tudes, Prof. Peirce concluded that the most accurate yet known is that by the chronometric method.

Much interest was elicited by the description of a new instrument for facilitating the projection of great circle routes in charts, and finding by inspection the course and distance, by Prof. W. Chauvener.

It is a wonder of simplicity and efficiency. Prof. Peirce complimented Prof. Chauvenet in having so well supplied what he himself had long tried to invent, but in vain.

The section then adjourned.

The meeting, at half-past 7 o'clock on Tuesday evenng, was occupied in hearing an address from Dr. Robert HARE on the subject of storms. Afterwards the association complied with the invitation of W. W. CORCORAN. Esq., and visited him at his residence.

SIXTH DAY. The sections met at 10 o'clock A. M., from their adournment yesterday, and commenced business. Section A was presided over by Lieut. Maury, and Section B by Prof. W. B. ROGERS. In Section A a proposition was offered to subdivide the section, which was at length discovered to be out of its power under the constitution.

GENERAL MEETING. The association was then called to order in general ceting, Prof. Dana in the chair. On the recommendation of the Standing Committee, Section A was subdivided into two sub-sections; the first being on astronomy and physics, the second on meteorology and technology. The general meeting then adjourned to meet again at half-past 2 o'clock, and receive the report of the commit-

tee on the revision of the constitution.

The sections then resumed their sittings, with Section sub-divided; the third section being presided over by ieut. Col. W. H. EMORY.

In Section A the first paper was from Lieut. J. M.

ingenious and valuable.

Notes on a new electro-chronometric method, by Dr.

WOLCOTT H. GIBBS, was read by Lieut. HUNT.

The discussion of the subject was highly interesting, and showed that divisions of time may be recorded to perhaps the two-thousandth part of a second. This pre-cision is not to be looked for by the use of the human and showed that divisions of time may be

senses as the media of observation, but through self-re-gistering instruments, which are free from "personal equaand the liabilities to error from the circumstances attendant on the phenomenon of vision.

Lieut. Hunr read a description of the United States Coast Survey apparatus for measuring base lines. By comparisons of results of the labors of various base-line determinations in different countries, it is claimed that, for accuracy and expedition united, none yet approach that of the Coast Survey. The methods used are such as to give linear results comparatively more precise than angular ones. Hitherto the instrumental means for de-terming angles have been deemed superior in point of accuracy to those for finding distances; this is now no

longer the case.
Prof. Coaklay asked if any of the base lines in

easurement? Lieut. Hunt replied that this had been done, at least for part of the distance, and estimated for the rest. Quite an animated discussion arose on this subject, which was concluded by an adjournment till I o'clock.

An account of Cloverden Observatory and the Shelby Kentucky) College Equatorial, by Prof. Gould, jr. and Prof. Jos. Winlock. This instrument appears to be one of unusual excellence. Its object-glass is nearly eight oches in diameter, and is of singular if not unequalled fame for clearness and freedom from air-bubbles and other

Prof. PRINCE bore testimony to the excellence of this

acknowledgment of the section.

Prof. Maury thought so beautiful a glass would offer superior opportunities for daguerreotyping the moon. He had recently examined a daguerreotype of that luminary by Whipple, of Boston, which had surprised him for its minuteness of delineation. In particular he noted the representation of a conical mountain, beautifully shown, and furnishing suggestions even better than are derivable

from the telescopes.

Prof. Peirce, in further remarking on the superiority of the Shelby College Equatorial, said that it had been submitted to Prof. Agassiz, who had told him (Professor Peirce) that it exhibited objects in the moon (he would not say what they were) never observed before. The next paper was by Lieut. MAURY on the basin of

the Atlantic. Some interesting facts were developed. Thus, in sounding for the bottom of the deep ocean, the line will always run out after the lead or weight has reached the bottom. This is undoubtedly owing to strong currents at those depths. Reference was made to the re-cent experiments of Lieut. Berryman in sounding across the western side. This Lieut. Maury accounted for by supposing the stream stands above the general level of of a submarine telegraph. Lieut. Maury thinks the sea was made, and better for the purpose. North of the banks of Newfoundland the depth was only about two miles, whilst south and east of them it ran to at least five thousand fathoms. These greatest depths are free from san and debris, and give up as their material an earth com posed of sea-shells

Prof. Bache said the bottom at these depths may be said to consist of infusorial mud. It was remarkable that the water from these depths did now show the pre-

sence of infusoria. Prof. Peirce remarked than when a quantity of the earthy matter at the bed of the ocean was shown to Prof. Agassis, and pronounced to contain nothing noteworthy. Can you see nothing here? Do you no erceive that the coating on one surface of these particles and not on the other proves that the depths wherein they laid were undisturbed ?

The next paper read was by Lieut. HUNT, on the naure of forces. This paper was very abstruse, involving uestions in the highest department of the mathematics. The next paper was by the youngest contributor of the session, an officer of the navy, Mr. O. C. BADGER, on a method of observing at sea for the determination of the latitude, longitude, and variations of the compass. It was pplauded by the section.

The concluding paper was by Commander GLYNN, U.

S. N., on the transparency of the ocean. The subject was treated by this gentleman in a most agreeable and happy manner, combining the spirit of scientific investi-gation with the characteristic outspokenness of the sailor. commander Glynn tested the lowest depth of the sea at which objects are visible from the surface, and found twenty-five fathoms, and then in the most favorable cir-cumstances. Whilst it was true that the sea water had been most transparent where the temperature of the ocean was highest, (thus twenty-five fathoms at 89° of Fahrenheit,) still he attributed this to the fact that this spot (in the Pacific ocean) was freest from admixture with the comparatively turbid waters of the great rivers of the east and northeast of Asia. Near Cape Horn the depth of vision is about ten fathoms.

Prof. BACHE thought the subject introduced by Com. Glynn highly interesting.

And Prof. Fransk hoped it would be published among the proceedings of the meeting.

And here the section concluded its labors. Survey of Canada Experimental observations on the sense of smell and taste, by Dr. H. C. HILGARD.

Some comparative observations on the carboniferous strata of North America, by Prof. H. D. Rogers.

GENERAL MEETING.

At a quarter to 3 o'clock the Association met in general meeting, preparatory to final adjournment.

The report from the Committee on the Amendments to he Constitution was read by Prof. A. D. BACHE. An adtional section was offered for the consideration of the Association during the coming year, along with the above amendments, by Prof. W. B. Rogers, which gave rise to some strong expressions of feeling on the part of various members. Unanimity was at length, however, apparent-

A series of reports of committees were then offered and ccepted. The first was a report favorable to petitioning Congress to grant an appropriation to furnish the means of constructing, in a finished and worthy manner, the selfregistering apparatus invented by Prof. MITCHELL, of Cincinnati. Next, on petitioning Congress on the subject of geographical surveys of the States, and to report that Loomis, Chauvenet, Bond, Gibbs, Coffin; Lieuts. Davis, Maury, Henry; Doctors Gould, Leconte; Messrs. Frazer, Barnard, Mitchell, and Barstow.

GILLISS, on the Astronomical Expedition to Chili. After a former memorial had been submitted by the Hon. Edw. Evennt; a report dividing among the members of the agreed that the section suggest the standing committee committee on the celipse of the 26th instant the particuthe liberality and zeal of the Chilian Government in behalf of astronomical science.

Prof. Gould read a paper of Lieut. Schort's on the On recommendation of the Standing Committee the As-

sociation then passed the following resolution, viz:

Resolved, That this Association desires to express its deep appreciation and admiration of the liberality and zeal for science of the Chilian Government, (as manifested in its establishment of an astronomical observatory and in sending observers and instruments to Peru to observe the solar eclipse of November 30, 1853,) and to express its carnest desire that so noble an example may not be without its effect upon other nations.

The next report recommended the appointment of a committee on the subject of standard weights and mea-

Next thanking Prof. Amy, of the Greenwich Observa-tory, England, as before published. Next admitting certain new members.

Allowing a committee of members residing in Camridge, Massachusetts, consisting of Professors Peirce, Agassiz, Lovering, and others, to determine what papers offered at the Washington meeting should be published

among the Transactions.

That the Standing Committee have power to complete the printing of the Cleveland Transactions. That the Standing Committee be empowered to act for the Association in its absence in relation to any yet unfinished business.

It was then unanimously Resolved. That the members of the American Associa-A. D. Bache.

pleasant. Resolved. That the hearty thanks of the members of the Association be returned to the President and other officers of the Government, and the officers of the army and navy residing in the city, and the citizens of Washington for the very hospitable, kind, and munificent arrangenents made for their entertainment during the meeting that has just closed.

Similar thanks were passed to the local committee for their care and attention; to the Superintendent of the Coast Survey; to the Mexican Boundary Commission; to the Superintendent of the National Observatory : also to the city of Alexandria for their invitation, which was not availed of by reason of the bad weather on Saturday; to the Secretary of the Smithsonian Institution : also to the Alexandria and Orange Railroad Company; to the directors of the New York Crystal Palace; to the Faculty of Georgetown College; to the Young Men's Christian Association of the city of Washington; and to a number of railroad companies that had reduced their fares to members on their

way to and from the Association.
On motion of Lieut. Hunt, U. S. Army, the Association adjourned to meet again at Providence, Rhode Island, on the third Wednesday of August, 1855.

## MR. FILLMORE AT CHARLESTON.

During the forencon of Wednesday numerous citizens of Charleston, without distinction of party, called on Mr.
FILLMORE at the Mills' House to pay their respects to im and hail his welcome presence among us. A committee of citizens waited on him there, and tendered him a public dinner on Friday, or at any other time that might suit his convenience; but, as his arrangements would constrain him to leave the city on the day above-named, he declined the dinner.

At one o'clock P. M. the public ceremonial of his recep-

tion by the Mayor and Aldermen of the city and his introduction to the citizens generally took place. The members of the City Council assembled in their room with their staves of office. The committee of Council proceeded to the Mills' House, waited on Messrs. Fill-more and Kennedy, and escorted them to the hall. On entering the guests were met by the Council, and welcomed by Mayor Hutchinson in a brief but most appropriate manner. As the representative of the municipal govern-ment, and through it of the city and community, the sure afforded by a visit of a citizen who had filled with honor and acceptance the highest trust of the Republic. The welcome tendered by Charleston, said the Mayor. was above and irrespective of all partisan and political considerations. To the address of the Mayor, which was frequently interrupted by the plaudits of the large concourse of citizens assembled, Ex-President Fillmore replied in a most happy manner, remarking, in the course of his response, that it was his desire to see the South for himself, and his tour so far had fully confirmed him in the impression that the causes of difference and misunderstanding between the North and the South would disappear just in proportion as the two sections under-stood each other. The more they knew the better they

would love each other.

The Mayor and Council accompanied Mr. Fillmore to the Council Chamber, where for some time our citizens in great numbers poured in to pay their respects to Mr. great numbers poured in to pay their respects to Mr. Fillmore, and give "confirmation strong" to the welcome which had been accorded by the chief magistrate of the city. Afterwards, in company with the Mayor and a committee of Aldermen, he visited the public institutions of the city, rode along the battery, White Point Garden, and city generally, and extended his ride to the fine farm and elegant villa of Arthur G. Rose, Esq. on Ashley river, formerly the property and residence of the Hon. William Lowndes. He closed the social festivities of the day by enjoying a sumptuous dinner at Mr. Petigra's, where the feast of reason and flow of soul were kept up until a late

On Thursday Mr. Fillmore took an excursion in the steamer Clinch to Fort Moultrie and about the harbor. He then witnessed the annual parade of the Fire Department, afterwards dined with the Hon. Mitchell King, and in the evening partock of a public collation at the Charleston Hotel.—Charleston Courier.
